

Job Description

Title: Database Administrator
Department: Product Development
Revised Date: November 2007

Objective

This is an excellent opportunity for an experienced DBA who is looking to leverage their SQL Server development experience in an smaller and more nimble environment where DBAs are given a great deal of control over the underlying data model, good ideas are encouraged and implemented, and you can see all phases of a project through from brainstorming to deployment and maintenance. Documentation, Standards and Best Practices are encouraged and our development team has enough processes in place to be effective and organized without restraining innovation and creativity.

Essential Responsibilities

- Work closely both supporting and alongside object oriented developers, so good communication skills and a customer service attitude are required at all times.
- Design, test, troubleshoot and deploy database schema changes into production.
- Provide High-level SQL Server technical support for customer issues.

Required Knowledge / Skills:

- 6+ years SQL Server Developer\DBA Experience
- 3+ years experience working as part of a software development team in a development (non-IT) capacity.
- Expert level knowledge of SQL Server 2000 and 2005 Setup and Configuration, security, Instances, Backup and Recovery a must
- Expert level experience optimizing queries and indexes, and designing and building stored procedures.
- Real Work experience designing, testing, and deploying database schema changes into production is a must.
- Visual Basic / VBScript or ADO experience required.
- Must provide High-level SQL Server technical support for customer issues
- Expert level knowledge of SQL Server Performance troubleshooting
- Expert level knowledge of DTS and SSIS, and ETL best practices required
- Microsoft Access Development and troubleshooting

Preferred Knowledge / Skills:

- SAN and/or Clustering Experience Desired
- ASP Or .NET programming
- SQL Server Reporting Services Development
- SQL Server Analysis Services and data warehousing schema design a plus
- Call Center / customer service industry Experience helpful
- CRM/ERP administration experience (Oracle, Siebel, PeopleSoft, NetSuite, Microsoft Dynamics) a plus
